King Kong Minor Release (June 26th, 2020)

The King Kong Minor release has the following features going in at the high level:

- **Fix for the JS vulnerabilities -** jQuery and Bootstrap versions were out of date and vulnerable to XSS attacks. We upgraded the version across the modules to protect the system from XSS attacks
- **Custom Error Page -** The system now displays the custom error page for any bad url entered by the user instead of the generic 404 error page. This was implemented to address one of the vulnerabilities found through CIT scan
- **Query Tool -** Added "Show/Hide Blank Columns" button which allows the user to show/hide the blank columns under the data table view
- **NEI Public Site - 508 Compliance** - Implemented 508 compliance on the NEI site pages (NEI, eyeGene, PROWL and AMD)
- **GUID Module:**
    - Added the Data set status column under the "Datasets where GUID has been used" table
    - Added the download capability for downloading the meta information for the "Datasets where GUID has been used" table
- **User Guide | Submission Tool:** Uploaded the updated version of the User Guide for the Submission Tool
- **ProFoRMS - Data Collection Page -** Provided the ability to view both GUID and Subject ID under the tables
- **PDBP Biosample Catalog:** Included SUREIII biospecimens in the BiosampleCatalogv6 form
- **Account Renewal Email** - Added a link for renewing the expired privileges in the renewal email for the users
- **NEI Portal Site:** Updated the color scheme for the eyeGene portal
